## Computational thinking

From Wikipedia, the free encyclopedia

**Computational thinking** (CT) is the mental skill to apply concepts, methods, problem solving techniques, and logic reasoning, derived from computing and computer science, to solve problems in all areas, including our daily lives.<sup>[1]</sup> In education, CT is a set of [problem-solving](#) methods that involve expressing problems and their solutions in ways that a computer could also execute.<sup>[2]</sup> It involves automation of processes, but also using computing to explore, analyze, and understand processes (natural and artificial).<sup>[3][4][5]</sup>
